

Figure 1a · From prose to a requested view

Published narrative · Aesop, The Lion and the Mouse · exploratory extraction

SOURCE · complete evidence shown

- S1 A LION was awakened from sleep by a Mouse running over his face.
- S2 Rising up angrily, he caught him and was about to kill him, when the Mouse piteously entreated, saying: “If you would only spare my life, I would be sure to repay your kindness.”
- S3 The Lion laughed and let him go.
- S4 It happened shortly after this that the Lion was caught by some hunters, who bound him by strong ropes to the ground.
- S5 The Mouse, recognizing his roar, came and gnawed the rope with his teeth, and set him free, exclaiming:
- S6 “You ridiculed the idea of my ever being able to help you, not expecting to receive from me any repayment of your favour; now you know that it is possible for even a Mouse to confer benefits on a Lion.”

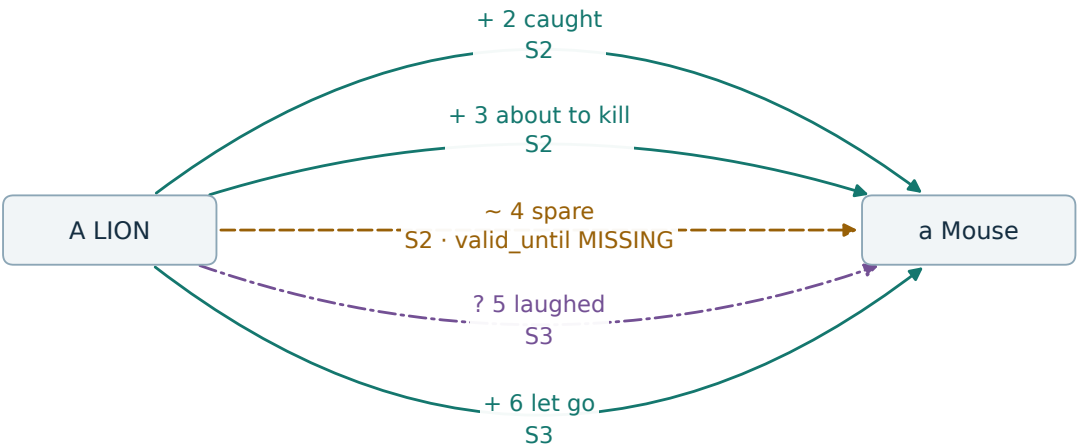

USER REQUEST · exact executed action question

Which physical running/waking, capture, binding, rope-gnawing and release relationships involve the Lion, Mouse, hunters and ropes? Exclude dialogue, intentions, laughter and the moral.

Before the request: actual query-blind extraction

S2–S3 detail: 5 of 12 records; full graph in the supplement.

Preserved limitation

S2 is a conditional plea to spare the Mouse. The generated 'spare' record loses that scope and misspells valid_until as 'valid until'. Capture and release are useful; the error is not removed.

+ supported ~ partial x unsupported ? unresolved | irrelevant

Status: retained assessment. A citation badge is a link, not proof of support.

Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 1a. Aesop's complete The Lion and the Mouse (Townsend translation, Project Gutenberg #21), with the executed action question. The pre-request panel contains every actual query-blind record citing S2 or S3: five of twelve records, including the incomplete 'spare' claim and underdefined laughter object. Seven undisplayed records remain in the full-output supplement. The pipeline arrow denotes the actual A computation, not a derivation of B. Status colours/symbols reproduce the retained Codex assessment; this is exploratory extraction, not registered C1/C2 acceptance.

Figure 1b · Two actual action-focused outputs

Same complete fable and exact question as Figure 1a · no semantic repair

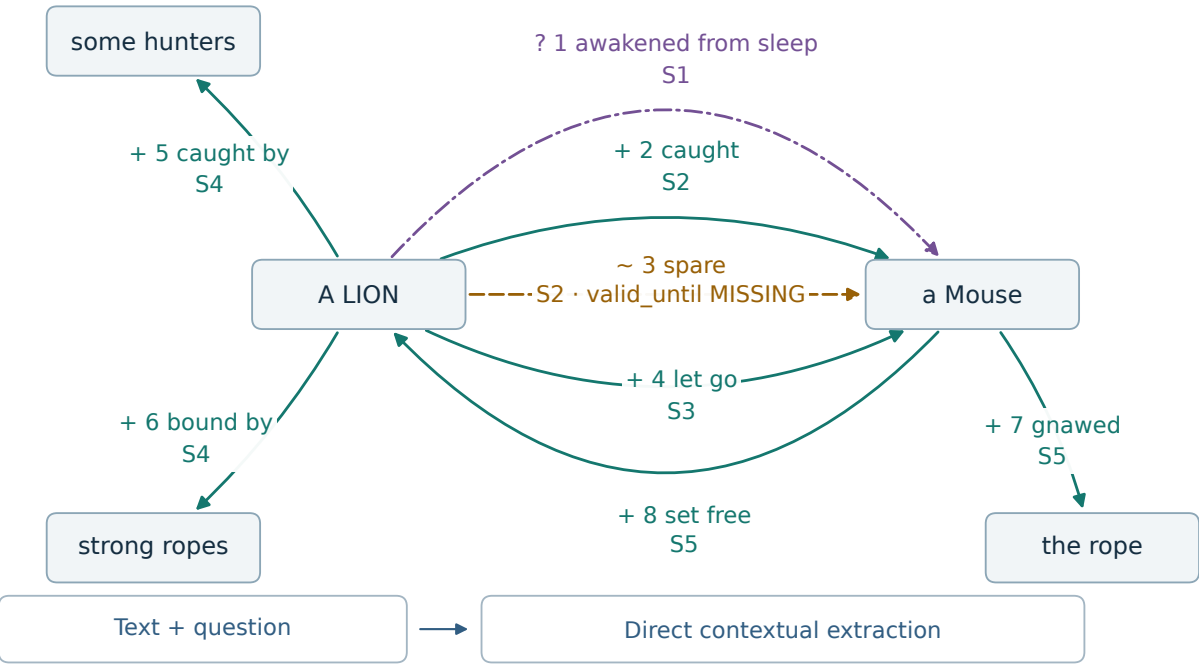

USER REQUEST

Which physical running/waking, capture, binding, rope-gnawing and release relationships involve the Lion, Mouse, hunters and ropes? Exclude dialogue, intentions, laughter and the moral.

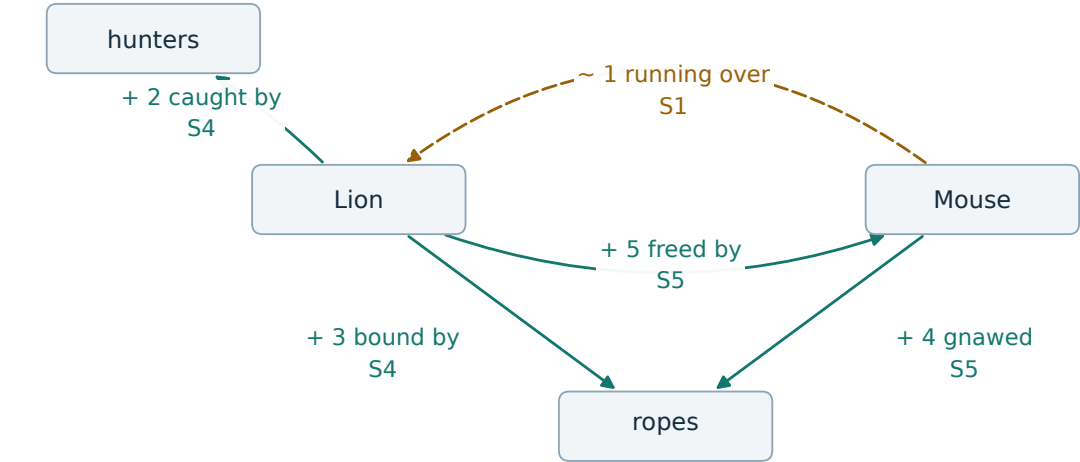

A · Fixed selection from the actual pre-extraction

Strict qualified F1 0.625 · 8 predictions

B · Direct contextual extraction

Strict qualified F1 0.308 · 5 predictions

Missing target information · not model edges

B omits the Lion catching and releasing the Mouse; 'running over Lion' loses the face-specific endpoint. Passive release/capture wording preserves meaning but remains a strict-match miss.

+ supported ~ partial x unsupported ? unresolved I irrelevant
Status: retained assessment. A citation badge is a link, not proof of support.
Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 1b. Complete A and B answers to the same fable action question shown in Figure 1a. A selects eight existing records; B independently generates five records from the complete text plus question. Strict qualified-fact F1 is 0.625 for A and 0.308 for B, with full output denominators. B captures rescue relationships but omits the Lion's earlier capture and release of the Mouse, and loses the face-specific running endpoint. Some inverse wording is semantically supported while failing the frozen strict matcher. Missing reference content appears only in the callout. Literal names and parallel assertions remain distinct.

Figure 2a · One story, two information needs

Synthetic development · Harbor · A: pre-extract/select

SOURCE · complete evidence shown

S1

Lena owns Cobalt Compass.

S2

Omar owns Amber Lantern.

S3

Priya carries Cobalt Compass from day 0 up to but not including day 6.

S4

Lena carries Amber Lantern from day 1 up to but not including day 5.

S5

Lena is in North Hall from day 1 up to but not including day 5.

S6

Omar is in East Garden from day 0 up to but not including day 3.

S7

Priya is in Stone Shed from day 3 up to but not including day 6.

S8

Silver Flute is in West Pier from day 2 up to but not including day 4.

S9

Lena believes that Cobalt Compass is in North Hall.

S10

In reality, Cobalt Compass is in East Garden.

S11

Omar believes that Amber Lantern is in Stone Shed.

S12

In reality, Amber Lantern is in West Pier.

S13

Priya owns Silver Flute.

S14

Lena is in Stone Shed from day 7 up to but not including day 9.

REQUEST 1 · possession

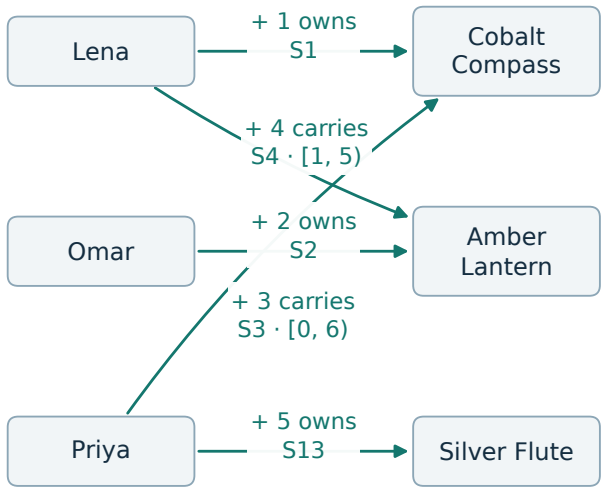

Who owns or carries what? Return all and only directly narrated ownership and carrying relationships, retaining every stated interval.

REQUEST 2 · locations

Which directly narrated location relationships have an explicitly stated interval overlapping day 2 up to but not including day 4? Return all of them with their full evidence-stated intervals, not clipped to the question window. Exclude undated locations and beliefs.

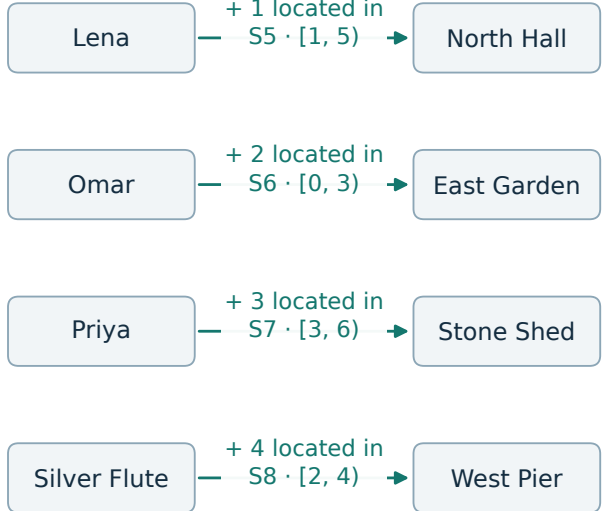

Actual selected ownership / carrying

Strict qualified F1 1.000 · 5 predictions

Actual selected timed locations

Strict qualified F1 1.000 · 4 predictions

Each view is a fixed selection from the same actual query-blind collection. All returned records are shown; see Figure 2c for the un-clipped intervals and Figure 2b for independent contextual outputs.

+ supported ~ partial x unsupported ? unresolved | irrelevant

Status: retained assessment. A citation badge is a link, not proof of support.

Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 2a. The complete synthetic Harbor story and its exact executed possession and interval-location questions. Both graphs are the complete A selections from one actual query-blind collection, not independent reconstructions. All five possession and four location predictions match their respective references (strict qualified-fact F1 = 1.000 for each). The location view preserves full generated intervals rather than clipping them to the [2,4) question window. This illustrates fixed projection and explicit qualification, not novel ontology construction. Full pre-extraction and the other approach are retained in the supplement and Figure 2b.

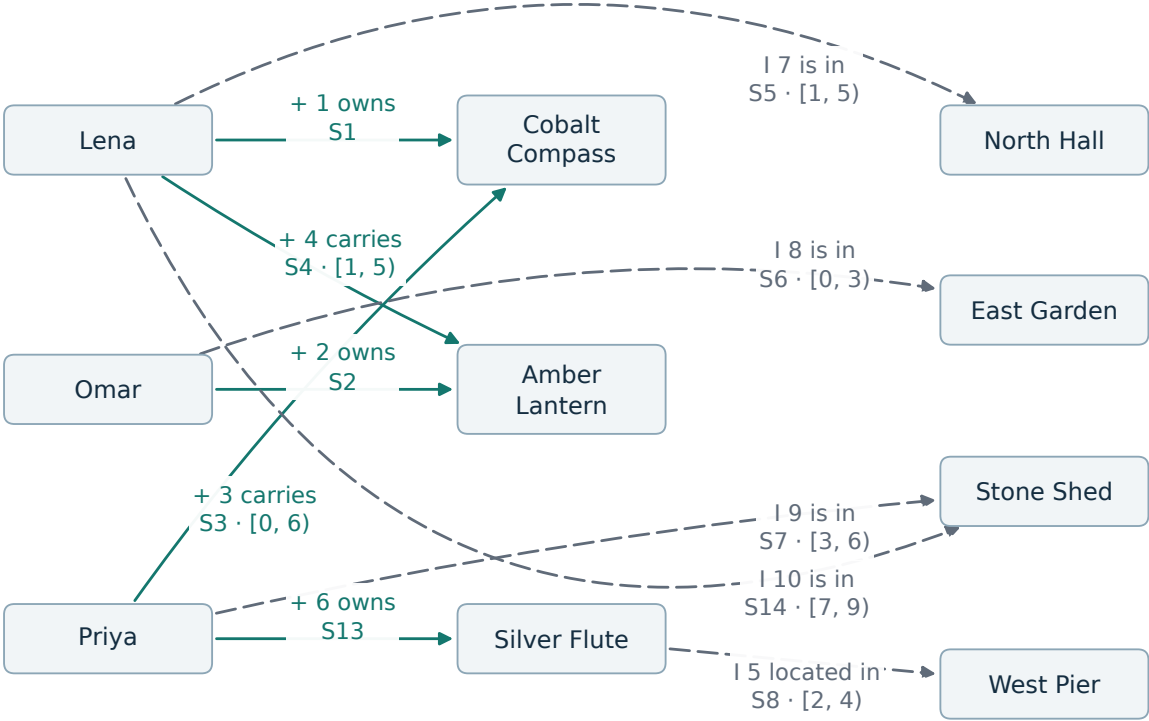

Figure 2b · Correct intervals, excess information

Same complete Harbor evidence and exact requests as Figure 2a · B: direct contextual extraction

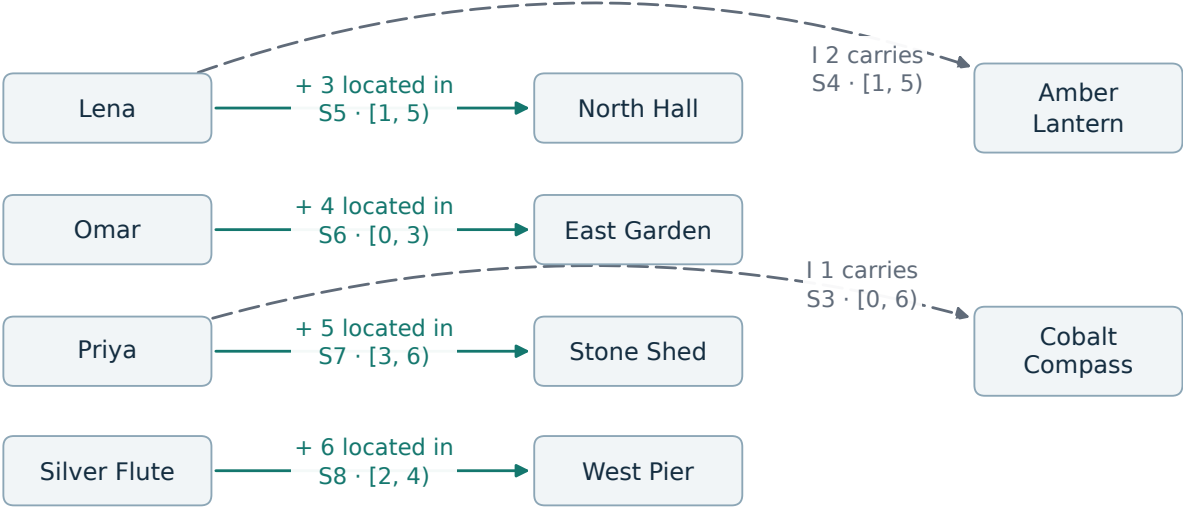

Request 1 · Actual possession answer, including all extras

Strict qualified F1 0.667 · 10 predictions

Request 2 · Actual location answer, including carrying extras

Strict qualified F1 0.800 · 6 predictions

I = source-supported but irrelevant to this request. All 10 possession and all 6 location predictions remain in the denominators; fewer displayed nodes would not establish improvement.

+ supported ~ partial x unsupported ? unresolved I irrelevant
Status: retained assessment. A citation badge is a link, not proof of support.
Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 2b. Complete independent B contextual answers to the two Harbor questions in Figure 2a. The ten-record possession answer contains five source-supported but irrelevant location facts; the six-record location answer contains two irrelevant carrying facts. Their strict qualified F1 values are 0.667 and 0.800. These facts are visibly marked I and remain in all metric denominators. Correct intervals do not establish correct selection. The two graphs are not obtained by filtering A, and their layouts or node counts are not evidence of ontology construction.

Figure 2c · Full validity versus request window

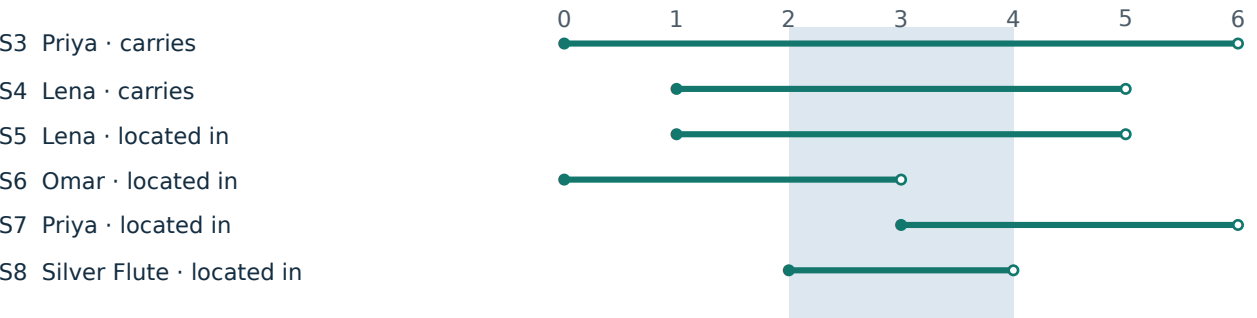

Harbor · exact model-generated bounds from the two fixed selections in Figure 2a

SOURCE DETAIL · S1-S2 and S9-S14 omitted here

- S3** Priya carries Cobalt Compass from day 0 up to but not including day 6.
- S4** Lena carries Amber Lantern from day 1 up to but not including day 5.
- S5** Lena is in North Hall from day 1 up to but not including day 5.
- S6** Omar is in East Garden from day 0 up to but not including day 3.
- S7** Priya is in Stone Shed from day 3 up to but not including day 6.
- S8** Silver Flute is in West Pier from day 2 up to but not including day 4.

Display-only source excerpt; the model received all 14 sentences shown in Figure 2a. The location request is overlap with [2,4), not a request to rewrite validity bounds.

Generated intervals stay intact; the question window is separate

Shading: request [2,4). Filled start / open end: generated [start,end). Units: days.

+ supported ~ partial x unsupported ? unresolved | irrelevant

Status: retained assessment. A citation badge is a link, not proof of support.

Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 2c. Full model-generated bounds from A's Harbor possession and location selections. The six quoted source sentences support the six timeline bars; the model received all fourteen sentences, not this display excerpt. Filled starts and open ends denote [start,end); the shaded [2,4) region is solely the user's location window. Carrying bars are included to show the ownership/possession request, not to declare them relevant location answers. Source order and full bounds are retained; no onset or endpoint is inferred or clipped. The exact questions appear in Figure 2a and the caption companion.

Figure 3a · A useful action graph with a role error

Published narrative · Lewis Carroll, Alice's Adventures in Wonderland, Chapter I · B output

SOURCE · complete evidence shown

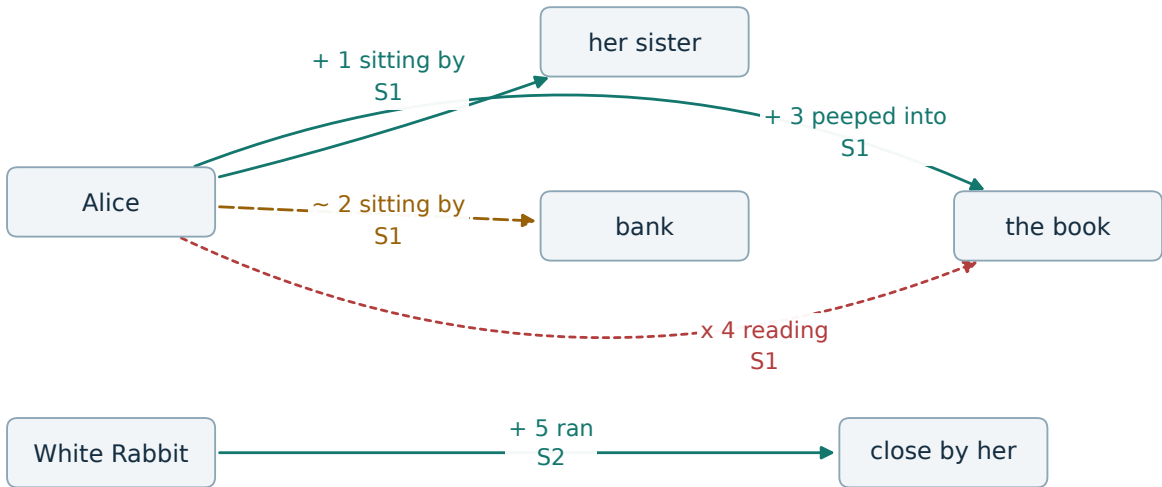

- S1 Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, "and what is the use of a book," thought Alice "without pictures or conversations?"
- S2 So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

REQUEST 1 · actions

Which sitting/location, reading/inspection and running relationships involve Alice, her sister, the book, bank and Rabbit? Exclude thoughts, feelings, appearance and book-content properties.

Text + action question → direct contextual extraction

Strict qualified F1 0.400 · 5 predictions

Genuine error and lost specificity

The text assigns reading to Alice's sister; B instead says Alice was reading. 'Sitting by bank' is less specific than 'on the bank'. The Rabbit's 'close by her' wording is retained, not silently converted into an Alice node.

+ supported ~ partial x unsupported ? unresolved | irrelevant

Status: retained assessment. A citation badge is a link, not proof of support.

Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 3a. The complete opening Alice passage (Carroll, Project Gutenberg #11) and B's exact executed action question. All five actual assertions are drawn. Correct inspection and Rabbit movement coexist with an unsupported reader assignment: the source says the sister reads, but the graph says Alice reads. 'Sitting by bank' is less specific than the narrated on-bank location. Strict qualified F1 is 0.400. The phrase 'close by her' remains its own literal endpoint rather than being silently normalized to Alice. Source-based status is the retained Codex assessment, not an independent review or a new score.

Figure 3b · Thought preserved as sentence-valued nodes

Same full Alice passage · independent B claims output, not a transformation of Figure 3a

SOURCE · complete evidence shown

- S1

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, “and what is the use of a book,” thought Alice “without pictures or conversations?”
- S2

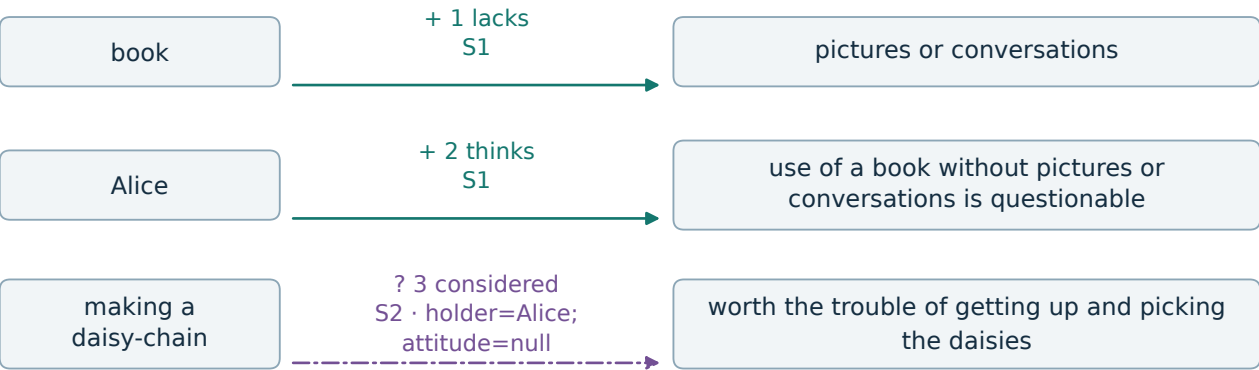

So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

REQUEST 2 · claims and thoughts

What does the passage say about the book's absent content and Alice's thoughts about the usefulness of such books and making a daisy-chain? Exclude physical actions, locations, appearance and the Rabbit; preserve questions and consideration without treating them as decisions.

Text + claims question → independent contextual extraction

Strict qualified F1 0.000 · 3 predictions

Meaning and required structure are separate

The combined absence and sentence-valued thought preserve 3/4 target meanings in the retained Codex assessment (strict F1 = 0). These are actual object strings, not reconstructed propositions. The daisy-chain record lacks attitude and may imply a settled judgment.

+ supported ~ partial x unsupported ? unresolved I irrelevant

Status: retained assessment. A citation badge is a link, not proof of support.

Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Figure 3b. The same complete Alice evidence with the independently executed B claims question. All three actual records are shown as assertion-lane graphs; sentence-valued objects remain model-authored node labels. The combined missing-content object and rhetorical thought preserve three of four reference concepts in the retained Codex semantic assessment, although strict qualified F1 remains 0.000. The daisy-chain record supplies holder Alice with null attitude and may turn consideration into a positive judgment. No decomposed proposition or missing qualification is inserted. Semantic coverage is not strict F1 or scientific acceptance.

Supplementary S1 • Failure and ambiguity

Published narrative • Arthur Conan Doyle, The Red-Headed League • original failures retained

SOURCE • complete evidence shown

- S1 I had called upon my friend, Mr. Sherlock Holmes, one day in the autumn of last year and found him in deep conversation with a very stout, florid-faced, elderly gentleman with fiery red hair.
- S2 With an apology for my intrusion, I was about to withdraw when Holmes pulled me abruptly into the room and closed the door behind me.
- S3 “You could not possibly have come at a better time, my dear Watson,” he said cordially.
- S4 “I was afraid that you were engaged.”
- S5 “So I am. Very much so.”
- S6 “Then I can wait in the next room.”
- S7 “Not at all. This gentleman, Mr. Wilson, has been my partner and helper in many of my most successful cases, and I have no doubt that he will be of the utmost use to me in yours also.”
- S8 The stout gentleman half rose from his chair and gave a bob of greeting, with a quick little questioning glance from his small fat-encircled eyes.

ACTION REQUEST • exact executed question

Which visit, conversation, pulling, door-closing, rising and greeting actions involve Watson, Holmes and the elderly gentleman? Exclude appearance and the content of dialogue.

Not an empty graph: two complete responses fail JSON parsing

A • query-blind collection

Retained final bytes: ...l,"valid_until":null,"holder":null,"attitude":null}}}}

Extra data: line 1 column 2532 (char 2531)

B • action answer

Retained final bytes: ...l,"valid_until":null,"holder":null,"attitude":null}}}}

Extra data: line 1 column 1683 (char 1682)

CLAIMS REQUEST • exact executed question

What does the dialogue explicitly convey about being engaged, past partnership/help in cases and expected help in the present case? Keep each claim or concern attributed to its speaker. Exclude physical movements, appearance, offers to wait and politeness about the arrival time.

B • One actual claim (record 2 of 3); not a reconstructed failure

Reference reading and limitation • not model output

The frozen reading treats Mr. Wilson as the addressee and Watson as 'this gentleman'. Local vocative ambiguity remains unresolved. Independently, the generated past partnership has null holder/attitude instead of preserving Holmes's report.

+ supported ~ partial x unsupported ? unresolved I irrelevant

Status: retained assessment. A citation badge is a link, not proof of support.

Unlabelled qualifiers are null (unstated), not timeless. Missing keys are marked.

Supplementary Figure S1. The complete Holmes excerpt (Doyle, The Red-Headed League, Project Gutenberg #1661), exact action and claims questions, and retained failures. The A pre-extraction and B action answer terminate with an extra closing brace; no empty or reconstructed successful graph is drawn. The single displayed usable claim is B claims record two of three, chosen to expose the locally ambiguous vocative participant reading and absent attribution. The other two claims and complete failed strings are in the supplement. The reference reading is explicitly not model output. All original strict-parser failures and scoped scores remain unchanged.
